

Carolinas Rehabilitation 2008 Brain Injury Program Outcomes

To ensure our inpatient care continues to rank among the highest in the nation, Carolinas Rehabilitation participates in several independent studies. These measure performance of rehabilitation facilities nationwide to better evaluate how our facilities, staff and services have positively impacted the rehabilitation of our patients. We will **continually strive** to meet excellent standards in our efforts to help patients who have sustained life-altering injuries to return to their homes and communities.

Total Persons Served: 378

Year after year, more of our patients are able to return to the community than other hospitals in the nation.

Due to our highly-trained medical staff, fewer of our patients transfer back to the acute care environment.

We provide up to 4.5 hours of therapy a day and 24 hours of rehabilitation nursing care for our brain injury patients.

55% of our patients report their overall satisfaction as "Excellent"
